**Comments** *(Italicized comments are from previous review)*

- 4g** The footprint of the new house has graciously taken into account the mature trees on site and the design has made an effort to protect as many of them as possible. Tree protection of City and private trees will be provided.
- The design intent of the plant material is to create an organic and unbalanced forms that support the strong architectural elements of the stone pier and wood columns which are the 'built' version of nature. The plant material is appropriate to the site conditions.
- The beds will be irrigated.
